FINANCIAL ENGINEERING EXECUTIVE DEGREE – MODELING, SIMULATION AND DATA ANALYTICS

Taught by an educational team from the leading French universities: Sorbonne Université Continuing Education and École Polytechnique Executive Education.

Executive version of the famous Parisian degree (Master El Karoui) in financial mathematics. Focus on acquiring, completing and updating your knowledge in mathematical, statistical and numerical methods for financial markets, accounting the recent developments of data science and artificial intelligence contributions.

**OBJECTIFS**

Executive version of the famous Parisian degree in financial mathematics. Taught by an educational team from the leading French universities: École polytechnique and Sorbonne Université. Focus on acquiring, completing and updating your knowledge in Mathematical, statistical and numerical methods for Financial markets, accounting the recent developments of data science and artificial intelligence contributions.

**COMPÉTENCES VISÉES**

**PUBLIC ET PRÉ-REQUIS**

- Graduates in science with various backgrounds and training in applied mathematics (including Probability and Statistics)
- Market practitioners: IT quants, front office, middle office, risks, software editor, asset manager
- Engineers in repositioning on the equity markets, rates, foreign exchange, hybrids, energy markets, commodities, precious metals, and cryptocurrencies
PROGRAMME

2 units of skills:
> Unit of skills 1: Financial Engineering: Fundamental tools and methods.
> Unit of skills 2: Financial Engineering: Advanced applications.
View the full training program.

MÉTHODES
Course and small classes
Professional seminars/meetings

MODALITÉS D’ÉVALUATION
- written final exam + pricing/calibration project joint with “Numerical methods”
- written final exam + computing project joint with “Stochastic Calculus & Control or Derivatives”
- Take home QCM + computing project joint with “Derivatives”
- Take home QCM + computing project joint with “Numerical methods”
- Written examination (QCM)
- Written examination + project (joint with other courses)
Evaluation depends on each course

LES + DE LA FORMATION
The job of Quant / Strat (quantitative analyst) is constantly changing due to the post-crisis regulatory upheavals, technological changes (GPU), the unceasing mathematical and algorithmic advances (Machine Learning). This effervescence is reflected on the one hand by new requirements in terms of calculation and risk control at the level of companies themselves, local or foreign regulatory authorities and the other by the arrival of new technological tools (parallelism), algorithmics (machine learning), mathematics (forward simulation, multilevel methods, etc.) and new models (rough volatility).

The purpose of the training is to allow both a (re) leveling of the participants but also to give them an overview of this constantly evolving situation as well as the tools to support it or even to impulse it.

Classes are held on fridays and saturdays.
Courses are held in French but the trainers are bilingual.

POUR CANDIDATER
- Send in: Resume + Cover letter + Last obtained diploma
- A recommandation letter in case of pursuing this degree on behalf of a company
